

**Amendments to the Specification**

Please amend the specification by replacing Paragraph [0019] of the specification as filed with the following amended paragraph:

**[0019]** Preferably, the drive members 24 rotate in such a way as to rotate the golf cart wheels 30 such that the golf cart is driven toward the rear of the cleaner 10 and toward the rear cleaning member 18, which substantially prevents the golf cart from moving linearly. However, the drive members 24 can rotate in either direction. Optionally, the cleaner may have a retainer that prevents the golf cart from moving linearly. Alternatively, a passively rotatable member, illustrated in FIG. 3, such as an idler wheel or cylinder 30 32, may be positioned adjacent to the drive member 24 to provide a slot for placement the golf cart wheels 30, which would prevent linear movement of the golf cart wheels.
